

A B S T R A C T

A SYSTEM AND A METHOD FOR MOLDING AND ASSEMBLING A FLUID
SPRAY DEVICE

5

A system for molding and assembling a fluid spray
device, said system comprising two multi-cavity molds (B,
C; B'; C') for molding two different parts (100, 200) of
said fluid dispenser device, the system being
10 characterized in that the first part (100) is a spray
head and the second part (200) is an insert for
assembling in said spray head (100), said system
comprising means for assembling parts coming from each of
the cavities of the first multi-cavity mold (B; B') in
15 pairs always with parts coming from a corresponding
respective cavity of said second multi-cavity mold (C;
C'), such that the same insert (200) is always assembled
in the same spray head, thereby guaranteeing constant
spraying performance for each dispenser device assembled
20 from the same pair of cavities.
